- NPI Operation Manager

CONTACT INFORMATION

+27 12 664 5688 afrison@afrison.co.za www.afrison.co.za Namib Poultry Industries (Pty) Ltd (NPI) is a proudly Namibian company. The plant is situated on the Klein Okapuka Farm, about 30 kilometres outside of Windhoek. Operations consist of a breeding section made up of three rearing sites and six laying sites, a hatchery, seven broiler sites with five houses each and an abattoir, totalling more than 110 000m². NPI has six strategically placed depots across Namibia enabling them to meet customers' needs. They are located in Windhoek, Katima Mulilo, Otavi, Ondangwa, Keetmanshoop and Walvis Bay.

CONSULTATION & DESIGN

During 2019/2020 the NPI Abattoir upgraded old technology fluorescent lighting as existing lighting did not meet lighting requirements. They required a top-off-the-range quality product with a high lighting output, energy efficient, water resistant and recyclable. An Afrison Business Developer consulted with NPI and with modern technology created a visual model for the client to experience the lighting they will receive even before a single luminaire was installed. The new replacement that was agreed on was the Afrison Drakensberg Low Profile 1,50m = 60w

SUPPORT

During the manufacturing process Afrison constantly updated NPI regarding the manufacturing progress. After the products were dispatched according to client specifications, Afrison tracked the shipment until safe delivery to NPI. Every product was marked with a QR code with complete technical and installation instructions, making it easy for NPI qualified installers to install the products. The Afrison Business Developer and Technical Department was on remote standby during the installation to assist with any queries. After installation, the Afrison representative for Namibia twice visited NPI to determine performance and to assist with any client queries.
